Maximum Marks	2 Marks

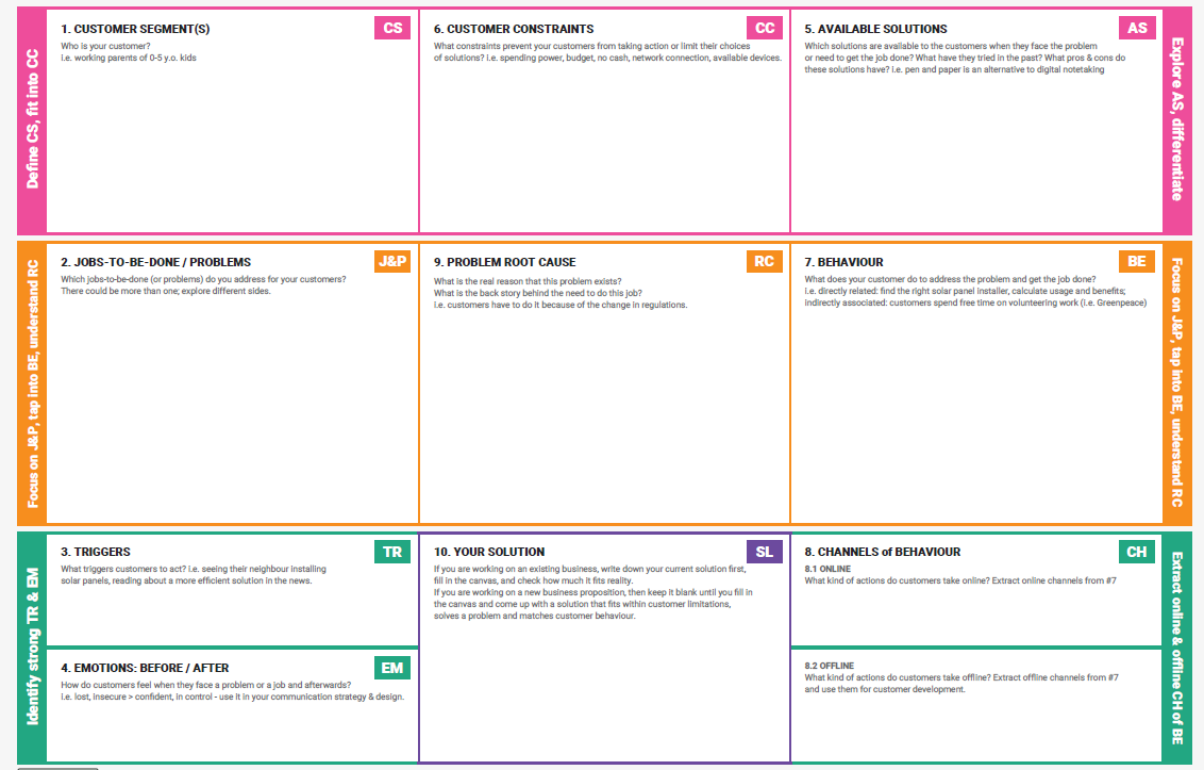

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Problem–Solution Fit Canvas

Project: Electric Vehicle Market Performance & Insights **Date:** 1 November 2026

1. CUSTOMER SEGMENT(S)	EV buyers researching the market; automotive analysts; manufacturers and business stakeholders comparing EV market performance.	**2. JOBS-TO-BE-DONE / PROBLEMS**	Compare annual EV sales by manufacturer; understand sales trends over model years; compare average range by vehicle category; examine price-versus-range patterns; review battery technology distribution, customer ratings, CO■ savings and manufacturing locations.
3. TRIGGERS	Considering an EV purchase; evaluating a manufacturer or vehicle category; reviewing changes in EV sales; preparing a market or business analysis; seeking evidence on range, price, battery type or environmental contribution.	**4. EMOTIONS: BEFORE / AFTER**	Before: uncertain and overloaded when relevant metrics are spread across separate records or charts. After: better informed and more confident when key comparisons are presented together. This is an intended user outcome, not measured survey feedback.
5. AVAILABLE SOLUTIONS	Manual spreadsheet comparisons, individual manufacturer websites, vehicle specification pages, market reports and separate charts. These can provide detail but may require users to gather and compare information from multiple places.	**6. CUSTOMER CONSTRAINTS**	Data availability and freshness; inconsistent definitions across sources; incomplete records; users' differing levels of data literacy; dashboard readability and screen size; public dashboard access requires an internet connection.
7. BEHAVIOUR	Users may compare manufacturers, inspect model years, review category averages, look for price/range trade-offs, check battery mix, compare ratings and inspect country-level manufacturing information.	**8. CHANNELS OF BEHAVIOUR**	Online: Tableau Public dashboard link, online vehicle specifications, manufacturer websites and digital market reports. Offline: discussions with dealers or industry colleagues and review of printed reports. These are plausible channels, not verified user research.
9. PROBLEM ROOT CAUSE	EV market indicators are distributed across different dimensions and may be difficult to compare consistently. Without a consolidated analytical view, users must manually assemble sales, range, price, battery, rating, environmental and geographic information.	**10. YOUR SOLUTION**	A Tableau dashboard titled Electric Vehicle Market Performance & Insights with eight views: Top 10 Manufacturers by Annual Sales; Annual EV Sales Trend; Battery Technology Distribution; Average Driving Range by Vehicle Category; Price vs Driving Range; Customer Ratings by Manufacturer; CO■ Savings by Manufacturer; and EV Manufacturing by Country.

Assumptions note: This canvas describes the intended audience and plausible needs/behaviours for the dashboard. No formal customer interviews or survey results were supplied; therefore these are hypotheses to validate, not measured customer evidence.
