Scalability & Future Plan

Date: 1 November 2026   Team ID: (left blank)   Project: Electric Vehicle Market Performance & Insights

This plan considers possible extensions to the current Tableau Public EV dashboard. The items below are proposed future improvements, not features claimed to be implemented already.

Current System Limitations

No.	Limitation	Impact	Priority
1	Dashboard is based on the supplied dataset snapshot.	Insights may become outdated if the dataset is not refreshed.	High
2	No verified interactive filtering or drill-down capability is evidenced in the supplied screenshot.	Users may need separate views to explore specific segments.	Medium
3	No measured load-time, concurrency or security test results were supplied.	Scalability and performance under heavy usage are not yet quantified.	Medium

Scalability Plan

No.	Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Published Tableau Public dashboard; traffic/concurrency figures not measured.	If adoption grows, deploy an approved analytics platform with capacity planning and usage monitoring.
2	Data Storage	Uses the supplied project dataset; exact size and storage configuration not provided.	Maintain a versioned source dataset and consider a managed database/warehouse if data volume grows.
3	Performance	No formal response-time benchmark available.	Optimize extracts and aggregations, reduce unnecessary marks, and test load times with representative data.
4	Security	Public Tableau Public dashboard; access is public.	Publish only non-sensitive data; use an access-controlled platform for confidential or restricted datasets.

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Add verified filters for year, manufacturer, battery type and vehicle category if supported by the workbook.	Next iteration	More focused comparisons.
Phase 2	Refresh dataset and document source, update frequency and data-quality checks.	1–3 months	More current and reliable analysis.
Phase 3	Optimize workbook/extracts and conduct timed performance testing.	3–6 months	Improved responsiveness as data grows.
Phase 4	Consider role-based access and a governed data backend for non-public data.	6–12 months	Safer collaboration and maintainability.
